SOLWAY RECYCLING LIMITED

BIN & LINER SYSTEM (Patent Pending)

Six simple steps to a tidy farm and fulfilment of farm waste regulations

Step 1

Assemble the patented Solway Recycling bin by locking the bin edges together with two over-centre clamps.

Step 2

When fitting the plastic liner pull it half way down the outside of the bin (as shown) then fit the lid which is held on with two over-centre clamps.

Step 3

Keep the bin next to the source of waste and transfer materials straight away. This reduces contamination and keeps your farm tidy. See waste streams leaflet.

Step 4

Once the bin is filled remove lid and tie liner securely with plastic twine or cable tie.

Step 5

Store filled liners in a secure site with suitable access for the collection lorry.

Step 6

Liners will be uplifted by our collection lorry on a pre-arranged day. All liners will be visually inspected to ensure they contain the correct material. The driver will ID tag each liner for traceability purposes.

CERTIFICATION

All farms operating this recycling system will receive a Waste Management Policy. Each waste transaction will generate individual Duty of Care Waste Transfer Notes and we will also issue an Annual Recycling Certificate. The Waste Policy will build up to show all of the farm's waste collection dates, the volumes and types of material.

SCHEME NON-COMPLIANCE

All liners will be inspected prior to collection. They will not be uplifted if they are found to contain excluded material, or if they are incorrectly tied or identified. If foreign materials are found during processing the liner and contents will be rejected, quarantined and disposed of correctly. Additional charges will be passed on to the farm or holding that supplied the waste.
